

Diesel Power Boost

BENEFITS

- ✓ restores engine performance
- ✓ removes deposits from injectors
- ✓ lowers exhaust emissions
- ✓ ensures quieter, smoother-running engine

PRODUCT DESCRIPTION

BIZOL Diesel Power Boost is a fuel additive especially developed to restore diesel engine performance. Clean injectors are essential for the engine performance of the car. If injectors are clogged, the engine will not get the right amount of fuel it needs. **BIZOL Diesel Power Boost** contains specially developed Deposit Control Additives (DCA). It removes deposits and prevents the formation of residues resulting in restored diesel engine performance. It can be used as a preventative measure at each service, after completing repair work to the fuel system or simply to improve engine running refinement.

Diesel Power Boost

Available Packages

Size	Art. Nr	Languages

Technical Data

Name	Value	Method
Appearance	liquid	
Colour	light brown	
Density at 15 °C	840 kg/m³	DIN EN ISO 12 185
Flash Point	>61 °C	

Applications

BIZOL Diesel Power Boost can be used in several ways. 1. Directly via fuel line. Disconnect the fuel supply and return lines and insert them into the system cleaner can. Start the engine and run it at different speeds for approximately 20 minutes. Switch off the engine before the can is empty, reconnect the fuel lines and check for leaks. 2. With the fuel filter. At each service, fill the fuel filter housing with the additive and pour the rest of the contents of the can into the fuel tank. 3. Pour into the fuel tank. Pour into the fuel tank at each service, ensuring that the tank is at least 1/3 full — one 500 ml can is sufficient for up to 70 litres of fuel.
